Tarp Bows

BENEFITS & FEATURES

- Traditional tarp bows are made of steel or aluminum tube and can be easily damaged during loading. Röchling's TrailerTarp Bows are less likely to be damaged due to the flexibility of the material.
- If impacted by large material or the loading equipment buckets, Tarp Bows will collapse and then spring back into original form with little or no damage. This leads to a longer life expectancy and better return on original investment.
- Improved safety for the driver as no need to move bows during and after loading.

• Bow Part Number: 101": **\$80**
RENYVNATNOA01375101

Pockets

ALUMINUM SOCKET PART NUMBER: 181333

Brackets are designed to be either welded or bolted into place.

Ringless Slick Disc

BENEFITS & FEATURES

- Ringless for easier, more secure installation
- Tighter ID for a more consistent installation even on older king pins
- By eliminating the steel retaining ring, no need to inventory replacement rings
- Silicone additive for additional lubrication
- Curl resistant polymer prevents the disk from sagging once installed - less sagging means less chance the disk could be damaged while the tractor and trailer are being hooked
- Traditional disk with steel ring might typically fall off after the initial "un-hook", new design may stay in place for a dozen or more cycles

Part Number: #108357

The steel ring was always the "weak link" in previous designs and often was not secure enough to keep the disk in place. As a result a damaged ring could prevent a successful lock between king pin and 5th wheel.

\$14.50
